

IN THE ABSTRACT OF THE DISCLOSURE:

Please amend the abstract of the disclosure as follows:

ABSTRACT

BB An optical head in which a plurality of semiconductor laser chips are adhered on a mount surface perpendicular to the tracking servo direction of a focusing lens. Fluctuation of an optical spot power is reduced even if the tracking servo is performed by the optical head having dispersion of an inner surface direction when a plurality of the semiconductor laser chips are mounted. In Fig. 1, ~~a mount surface for the laser chips 2, where~~ a plurality of the semiconductor laser chips 4a and 4b are adhered, ~~is arranged so as to be~~ have an alignment direction which is substantially perpendicular to the tracking servo direction 14 of the focusing lens 13.
